

WEEK 3

Aim

To design and develop a **Student Name Manager** using HTML, CSS, and JavaScript to dynamically add and delete student names from a list and display the total number of students.

Description:

This experiment involves creating a Student Name Manager web application that allows users to enter and manage student names dynamically. The application provides an input field and an **Add Student** button to add student names to the list. Each student is displayed with a **Delete** button, which allows the corresponding student to be removed from the list.

The total number of students is automatically updated whenever a student is added or deleted. HTML is used to create the webpage structure, CSS is used to provide styling and layout, and JavaScript is used to implement dynamic add, delete, and student-count functionality.

Program code:

```
<html>

<head>

  <title>Index-page</title>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width">

<style>

body{

  background-color: wheat;
```

```
display: flex;
justify-content: center;
align-content: center;

}

.box {
background-color: aliceblue;
width: 80%;
height: 80%;+
align-self: center;
border-radius: 20px;
display: flex;
flex-direction: column;

}

.box h1 {
margin-left: 150px;
margin-bottom: 0px;

}

#inpt {
height: 50px;
width: 50%;
```

```
    align-self: center;

}

#btn{

    background-color: grey;

    width: 20%;
    height: 50px;
}

.input1{

    display: inline-block;
    margin-top: 50px;
    margin-left: 150px;

}

ol{

    list-style-type: none ;
}

.student{

    background-color: lightblue;
    display: flex;
width: 80%;
    align-items: center;
    padding: 10px;
    margin: 10px;
    justify-content: space-between;
```

```
}
```

```
#total{  
    margin-left: 150px;  
}
```

```
#delbtn{  
    height: 40px;  
    background-color: red;  
    color: aliceblue;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div class="box">
```

```
<h1 >Student Name Manager</h1>
```

```
<div class="input1">
```

```
<input type="text" id="inpt" placeholder="Enter student name">
```

```
<button onclick="addStudent()"id="btn">Add Student</button>
```

```
</div>
```

```
<h2 id="total">Total Students: 0</h2>
```

```
</div>
```

```
<script>
```

```
    const students=[];
```

```

function addStudent(){
    let name=document.getElementById("inpt").value.trim();
    if(name==""){
        alert("Name cannot be empty!!");
        return;
    }
    if(students.includes(name)){
        alert("Student already exists!!");
        return;
    }
    students.push(name);
    let list=document.getElementById("total");
    list.innerHTML="";
    if(students.length==0){
        list.innerHTML="Total Students: 0";
    }
    else{
        list.innerHTML="Total Students: "+students.length;
        list.innerHTML+="<ol>"
        students.forEach(function (n,i){
            list.innerHTML+=`<li class="student"><span>${i+1}</span>
            <button onclick="delStudent(${i})" id="delbtn">Delete</button>
            </li>`;
        })
        list.innerHTML+="</ol>"
    }
}

```

```

    }

    function delStudent(index){
        students.splice(index,1);

        let list=document.getElementById("total");

        list.innerHTML="";

        if(students.length==0){
            list.innerHTML="Total Students: 0";
        }

        else{

            list.innerHTML="Total Students: "+students.length;

            list.innerHTML+="<ol>"

            students.forEach(function (n,i){

                list.innerHTML+=`<li class="student"><span>${i+1}.${n}</span>

                <button onclick="delStudent(${i})" id="delbtn">Delete</button>

                </li>`;

            })

            list.innerHTML+="</ol>"

        }

    }

}

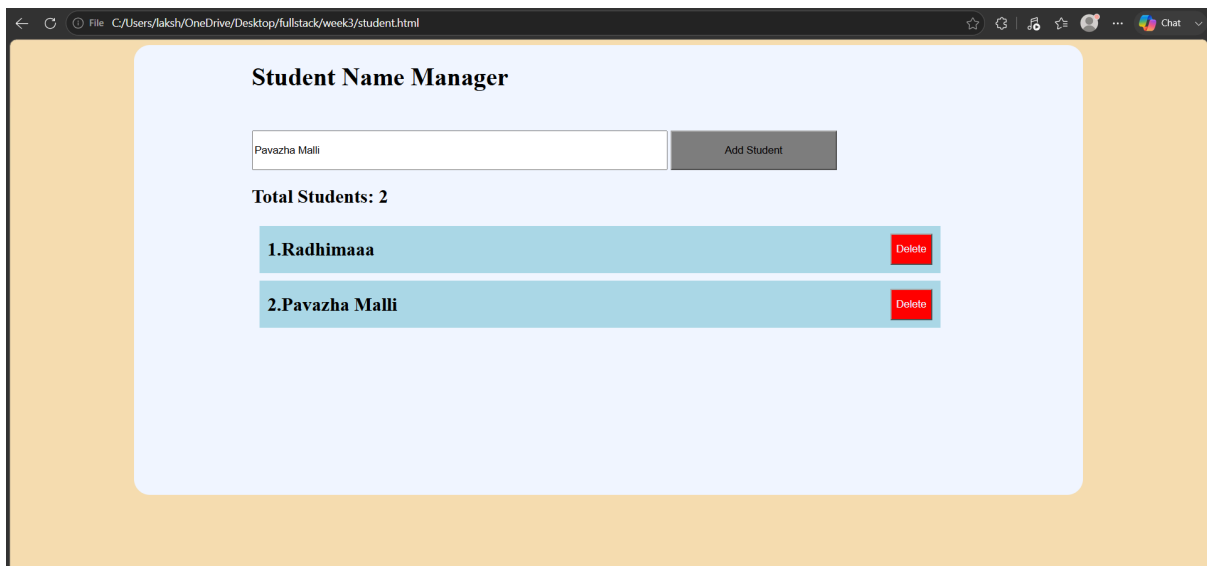

</script>

</body>

</html>

```

Output:

Result:

The Student Name Manager was successfully developed using HTML, CSS, and JavaScript. The application allows users to add and delete student names dynamically, while automatically updating and displaying the total number of students.
